DOCUMENTATION

DEVELOPMENT PROCESS

Throughout this process, I've had many changes of opinion regarding the Wireframe. This has involved various stages, including defining project requirements, designing the user interface, implementing specific functionalities, and conducting iterative testing and revisions. The wireframe has served as a guide for me to carry out this project alongside the new ideas I've had during the process.

JUSTIFICATION OF DECISIONS MADE

During the development of the website, I have made several key decisions to ensure an optimal user experience and efficient navigation. One of these decisions has been to use an interactive calendar interface to display matches from the 5 major European leagues. This decision is based on user-friendliness, as it allows viewers to easily visualize matches on a given day. Additionally, I have decided to include a page where we introduce ourselves and talk a bit about us. Finally, a page dedicated to the leagues where we also provide some information about them.

RESULTS ACHIEVED

I consider the webpage to be simple yet providing adequate information. From a technical perspective, I've utilized various components we've worked on during this period. I've experimented with backgrounds and sizes, effectively incorporated images, adjusted padding and margins, varied text sizes, and explored the use of flexbox and grid. This approach not only showcases the versatility of my technical skills but also ensures a visually appealing and user-friendly interface. By implementing these elements thoughtfully, I've enhanced the overall aesthetic appeal and functionality of the webpage, ultimately contributing to a positive user experience.
